LinkedIn — GitHub — LeetCode

Summary

Software Engineer with solid hands-on production experience building backend services and REST APIs across microservices. Experienced in working with large-scale codebases, debugging production issues, and shipping end-to-end features. Proficient in Java, Spring Boot, Node.js, React, and SQL, with a 9.0 CGPA in Computer Science.

Experience

Technology Intern – BrightChamps

Jan 2026 – Jul 2026

Node.js, Express.js, Sequelize ORM, MySQL, PostgreSQL

- Developed batched backfill scripts to generate ULID-based unique IDs for **~2.8M database records**; handled Sequelize migrations, model hooks, and composite indexes.
- Refactored inactive lead reallocation to an **SQS-based async pipeline**, decoupling processing into a dedicated Lambda handler with batch failure tracking.
- Built the student booking metrics feature end-to-end by implementing database migrations, model, service, and facade layers, along with an SQS handler to track student booking counts across courses.
- Implemented support for ULID-based unique identifiers across multiple microservices by updating validators, controllers, and service layers.
- Diagnosed and fixed production issues involving database constraint violations, Lambda timeouts, and cross-service dependency failures.

Full Stack Developer Intern – Friendsbook

Oct 2024 – Mar 2025

React.js, Node.js, Express.js, MongoDB, Socket.IO

- Developed and deployed a full-stack social media platform with Google Sign-In, post creation, and follow/unfollow functionality, onboarding 100+ users.
- Built real-time messaging using **Socket.IO**; implemented REST APIs with input validation and error handling for reliable client-server communication.
- Developed responsive user interfaces using React and integrated frontend and backend components for a seamless user experience.

Projects

TrackFlow – Project Management Platform

GitHub

Next.js, Node.js, MongoDB, Tailwind CSS, Socket.IO, Clerk

- Built a multi-organization project management platform with role-based access control, Kanban task workflows, and status-based task progression across organizations.
- Implemented secure invite-based onboarding using Clerk OAuth, real-time task-level chat via Socket.IO, and an activity log tracking all workspace events.
- Designed an analytics dashboard displaying task status distribution, per-member contribution stats, and overall project completion metrics.

ResumeHub – AI-Powered Resume Analyzer

GitHub

React.js, Node.js, Express.js, MongoDB, Google Gemini API

- Built an AI platform with three modules — ATS Checker, Job Matcher, and Interview Prep — powered by the **Google Gemini API** with structured JSON prompt engineering.
- Implemented resume parsing from PDF and DOCX formats; designed REST APIs to send extracted content to Gemini and return structured analysis results to the frontend.
- Generated personalized interview questions categorized into technical MCQs, descriptive, and behavioral types based on uploaded resume content.

Technical Skills

Languages: Java, JavaScript, Python

Backend: Spring Boot, Spring Security, Node.js, Express.js, REST APIs, Sequelize ORM, Socket.IO

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, GitHub, Docker, Postman, Vercel, Render

Education

Rajiv Gandhi University of Knowledge Technologies

2022 – 2026

B.Tech in Computer Science

CGPA: 9.0 / 10.0

Rajiv Gandhi University of Knowledge Technologies

2020 – 2022

Pre-University Course (PUC)

CGPA: 9.8 / 10.0

Balavikas English Medium High School

2019 – 2020

Secondary Education

CGPA: 10.0 / 10.0

Certifications

Spring Framework 6 & Spring Boot 3 – Udemy (Telusko EduTech)

React – Infosys Springboard
